Social rented housing turnover, registers and lettings - 2009

Summary

- Only two of the local authorities in the Cambridge sub-region currently manage their own social rented housing stock – Cambridge City and South Cambridgeshire.
- In most districts between 12% and 16% of the total dwelling stock is socially rented. The proportion is higher in Cambridge City – almost a quarter of properties in the city are social rented.
- Social stock annual turnover is around 5% to 6% each year across the sub-region as a whole. This is similar to the rate of turnover for private stock.
- At 1 April 2008 (?) there were just over 21,500 households on housing needs registers across the sub-region. Around 57% are currently in a “reasonable preference” category.
- Around 16% of households on housing registers require a home with three or more bedrooms. This has increased from 14% in 2001.

Summary of social renters profile

- Some 1,147 or 39% of lets were to single person households and 20% were to lone parents. Given the percentage of these households in the sub-region as a whole, these groups are somewhat over-represented in the social rented sector.
- South Cambridgeshire had the highest percentage of lets to older people followed by Fenland. St Edmundsbury, Cambridge City and East Cambridgeshire had a younger profile of tenants, with a larger proportion under the age of 31.
- Around a third of the lettings recorded were movements within the social sector. Living with family or friends and renting privately were the main forms of tenure prior to being housed after transfers.
- Overcrowding and moving to independent accommodation are the main reasons for leaving a previous residence. Being asked to leave by family and friends and needing to move because property was unsuitable due to ill-health were also common reasons for leaving.
- One of the target groups for shared ownership is existing social tenants. Shared ownership purchasers tend to be aged under 35, most are single people or couples. Nationally an income of £25,000 per year is required to access this form of tenure and most purchasers are employed. 135 of the lettings recorded were to people who roughly match this profile (about 5%).

Chapter 17. Social rented housing turnover, registers and lettings - 2009

17.1 Introduction

This report examines social rented housing in the Cambridge sub-region. The first section looks at social stock turnover over a five-year period from 2001 and 2008. The second section looks at housing needs registers and the type of properties sought by size (number of bedrooms). The final section looks at new RSL lettings from April 2007-March 2008, and provides details on household structure, the age of the head of household, previous tenure and reason for leaving the last settled address.

Social housing in this report means properties owned and managed by local authorities (LA) and registered social landlords (RSL). East Cambridgeshire and Huntingdonshire transferred all local authority stock before 2001, and the figures in these areas are solely for RSLs. The two Suffolk district councils underwent large-scale voluntary transfers during the period covered (St Edmundsbury in 2003 and Forest Heath in 2005) and Fenland District Council also transferred its stock in 2007. At the time of publication, South Cambridgeshire had just received a “no” vote from tenants on the possibility of stock transfer.

Table 1: Districts who manage their own housing stock, 2008

	LA manage own stock
Cambridge City	Yes
East Cambridgeshire	No
Fenland	No
Huntingdonshire	No
South Cambridgeshire	Yes
Forest Heath	No
St Edmundsbury	No

17.2 Data sources

Data in this report is taken from a number of different sources. Information on stock turnover and housing needs registers is taken from the Housing Strategy Statistical Appendix (HSSA) which is held on the CLG website¹. Local authorities complete this return for the CLG. It contains information for local authority housing and RSLs. However, figures from RSLs from this source should be treated with caution, and needs to be viewed with other data to gain a fuller understanding.

Information on household structure, previous tenure and reasons for leaving previous accommodation is taken from CORE (Continuous Recording)². This report focuses on general needs lettings, but CORE also provides information on supported housing. CORE is funded by the Housing Corporation and DCLG and managed by the Centre for Housing Research at the University of St Andrews. CORE is a mandatory scheme for all RSLs who manage more than 250 homes, but is voluntary for organisations that manage fewer than 250 units.

¹ <http://www.communities.gov.uk/index.asp?id=1501098> for 2005/06 returns.

² <http://www.core.ac.uk/core/hala-annual-reports.html#la>

Choice Based Lettings (CBL) was introduced sub-regionally in Feb 2008 in all districts except Fenland when it was launched in November 2008.

® In the future we plan to use the CBL system to analyse the housing needs data it provides. This chapter largely focuses on data up to 31 March 2008, so the introduction of CBL will not have affected information significantly by then.

17.3 Social Stock Turnover

Source: HSSA 2001/2 to 2007/8

In most districts, between 12% and 16% of properties are socially rented. In Cambridge City, this is significantly higher at 24%. Renting from a social landlord is the second largest tenure across the sub-region after owner occupation. Figure 1 and Table 2 look solely at social rented stock. Other affordable tenures such as intermediate rented and shared ownership are included in Chapter 11, *Dwelling profile & occupation*, table 1.

Table 3: Total social lettings (net of transfers and excluding new build), 2001-2008

	2001-02	2002-03	2003-04	2004-05	2005-06	2006-07	2007-08

Source: HSSA 2001/2 to 2007/8

Table 3 shows the total number of RSL and Local Authority homes which are re-let each year in each district. The table does not include lettings of newly built social rented properties. Figures on lettings to new build are included in Appendix 1.

Transfers within or between RSLs are not included and the number of local authority tenants transferring into RSL properties from 2002/03 onwards is also excluded. No figures are available for tenants transferring from local authority properties to RSLs in 2001/02. Local authority re-lets include all lettings to new local authority tenants, and exclude transfers, mutual exchanges and dwellings let through mobility arrangements. Again, new-build dwellings have been excluded.

Figure 2 shows the percentages of lets to new tenants compared to transfers and exchanges and lets through mobility schemes, for City and South Cambridgeshire, the two local authorities who still manage their own stock. Most of the local authority lets in these areas were to new tenants (between 59% and 73%). South Cambridgeshire had the largest percentage of internal transfers and Cambridge City had the largest percentage of lettings under mobility schemes and mutual exchanges.

Fig 2: Local authority lettings, 2006/07 & 2007/08

Source: HSSA 2006/7 and 2007/8

In 2007/08 a new question was added to the HSSA form, asking how many local authority lets were general needs and how many were lets into supported housing. In Cambridge City 77% of lets and in South Cambridgeshire 74% were general needs lets.

Table 4: Social stock net turnover, 2001-2008

	2001-02	2002-03	2003-04	2004-05	2005-06	2006-07	2007-08
Cambridge City	5%	5%	6%	6%	6%	4%	4%
East Cambridgeshire	5%	4%	5%	8%	5%	5%	8%

Sub-Region	5%	6%	6%	5%	6%	5%	5%

Source: HSSA 2001/2 to 2007/8

The stock turnover is the percentage of social units re-let to new tenants each year, (excluding transfers within the social rented sector). In the sub-region and in most of the districts, net annual stock turnover is around 5-6%. Fenland has the highest turnover at around 8%/year on average. South Cambridgeshire has the lowest turnover at 3%.

17.4 Housing needs registers

Housing needs registers provide evidence of the need for affordable housing, but due to differences in the way local authorities manage lists and variations in the number of residents being aware of the registers and putting their name on them, they are problematic and should not be used as the only way to measure housing need³. However, they do provide some useful comparative data across the housing sub-region.

Table 5: Households on housing needs registers, 2001-2008

	2001	2002	2003	2004	2005	2006	2007	2008
Cambridge City	4,472	2,860	3,218	3,724	4,251	4,743	5,214	5,984
East Cambridgeshire	1,245	1,400	1,538	1,737	1,477	1,442	1,479	1,603
Fenland	1,293	1,185	1,248	1,439	2,226	2,032	1,971	1,802
Huntingdonshire	3,416	2,724	2,910	2,772	2,887	2,425	2,139	2,178
South Cambridgeshire	1,500	1,733	2,207	2,553	3,538	4,155	4,661	3,626
Forest Heath	973	979	1,063	1,113	1,221	1,505	1,507	1,230
St Edmundsbury	2,122	2,230	2,813	3,104	4,118	4,673	4,433	5,088
Sub-Region	15,021	13,111	14,997	16,442	19,718	20,975	21,404	21,511

Source: HSSA 2001/2 to 2007/8

In most areas, the numbers on the housing needs registers have risen. This may be due in part to widening the statutory definition of vulnerable households in priority need, which came into effect in 2002 (see Chapter 18, *Homelessness*). There is also some variation in the management of needs registers. For example, Huntingdonshire had a policy review in 2002 and since then has been reviewing housing applicants every year on a rolling programme. In 2005, Huntingdonshire introduced a verification framework into their housing register where applicants were asked to provide identification and details of income and capital savings. Where this showed that applicants could afford a home in the private sector, they were assisted through housing advice into other housing options. In 2002 Cambridge

³ SHMA Guidance Annexes, April 2007, CLG.

City Council started contacting applicants seeking confirmation that they still needed to be on the list. This accounts for a large drop in the number of households on the register in this year.

Fig 3: Numbers of households on needs register 2001-2008⁴

Source: HSSA 2001/2 to 2007/8

The number of applicants on the housing register increased in all districts except Huntingdonshire between 2001 and 2008. The number of households on the needs register in South Cambridgeshire and St Edmundsbury in 2001 is more than twice as many as it was in 2001. In the sub-region as a whole the number has increased from just over 15,000 to just over 21,500, i.e. by just under 1,000 applicants per year.

As mentioned above, a sub-regional Choice-Based Lettings scheme has been introduced and the data from this scheme will be analysed and added to this SHMA when available. Under CBL, people are placed in different priority groups and must actively bid for advertised properties. Because people play an active role in looking for accommodation, it should give a more accurate understanding of housing need.

Another new question on the 2006/07 HSSA return asked about the number of applicants in a “reasonable preference” category. This includes

- People who are homeless or threatened with homelessness
- People in unsatisfactory housing conditions, including households in overcrowded or unsanitary accommodation
- People who need to move on medical or welfare grounds, including grounds relating to a disability
- People who need to move to a particular locality in a district where failure to meet that need would cause hardship.⁵

⁴ Excludes households seeking transfers

⁵ For further details see <http://www.communities.gov.uk/documents/housing/pdf/hssa200708.pdf>

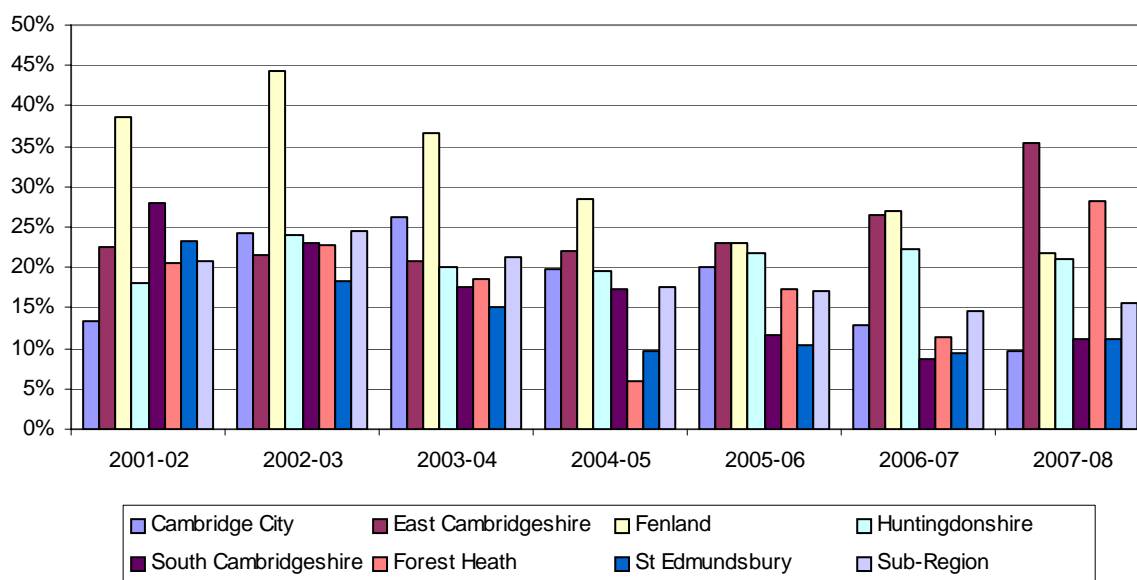

These are broadly equivalent to the CBL higher priority bands (A-C). Table 7 shows that in most of the district and in the sub-region as a whole more than half of those on the needs register are in a reasonable preference category.

Table 6: Housing register applicants in a reasonable preference category

	2007	% of HNR	2008	% of HNR
Cambridge City	4,880	94%	3,668	61%
East Cambridgeshire	60	4%	252	16%
Fenland	1,704	86%	1,544	86%
Huntingdonshire	1,885	88%	1,470	67%
South Cambridgeshire	3,344	72%	2,036	56%
Forest Heath	267	18%	785	64%

Fig 4: Social lets (re-lets and new build) as a % of needs registers, 2001-08

Source: HSSA 2001/2 to 2007/8

For the sub-region, around 24% of needs registers were cleared in 2002. This fell to 16% in 2008. The percentage in Fenland has fallen from 39% in 2001/02 to 22% in 2007/08. The percentage has increased in East Cambridgeshire and Forest Heath.

Table 7: Households on needs register by number of bedrooms needed, 2008

	1 bed	2 bed	3 bed	4 or more beds	Unspecified (or registered more than once)
Cambridge City	3,879	1,332	570	177	26

Sub-Region	52%	31%	13%	3%	0%

Source: HSSA 2007/8

The HSSA also provides data on the size of properties (by number of bedrooms) required by those on the housing needs register, as seen in Tables 9 and 10. The largest requirement across all districts is from smaller households (one or two bedrooms). More than half the register in Cambridge City, East Cambridgeshire, Forest Heath and St Edmundsbury is for one bedroom properties. In South Cambridgeshire and Huntingdonshire there are more households in need of a two bedroom property. Huntingdonshire also has the largest proportion of households in need of properties with four or more bedrooms. In the sub-region as a whole, 16% of need is for properties with at least three bedrooms. However demand for larger properties is increasing in most districts (see Table 11). For further historical information on property size requirement, see Chapter 29 *Future sizes of homes*.

The proportionately lower numbers of households in need of larger homes registering may be due to low expectations of being housed in an appropriately sized property. If people feel that their chances are low, they may try to solve their housing problems by other means.

Table 9: Percentage of properties requiring more than three bedrooms, 2001-2008

	2001	2002	2003	2004	2005	2006	2007	2008

Source: HSSA 2001/2 to 2007/8

Fig 5: Needs register and properties let by size, 2007/08

Source: HSSA, CORE

Figure 5 compares the percentage of properties required by bedroom size, with the percentage of properties let in the same period. There are differences in the % of homes required and let of each size. This reflects the profile of available properties, as well as the type of need by priority, e.g. there may be a large number of single people on the register, but they are a lower priority for housing than households with children.

® There is also a difference to be analysed between the number of people registering for each bedroom size, and the time they may wait to be let a home. Future analysis of the data from Choice Based Lettings may help to provide some further information on this.

17.5 Profile of social renters 2007/8

This section examines the profile of social renters in the Cambridge sub-region. All data is taken from CORE unless otherwise stated. CORE provides details of social renters housed in the past year and the most recent data available is from April 2007 – March 2008. This paper analyses household structure, age, whether the household is economically active and the type of property in which they have been housed.

Household structure

Table 10: Household structure by district

	Cambridge	E Cambs	Fenland	Hunts	S Cambs	Forest Heath	St Edmundsbury	Sub-Region	% Sub-Region

Source: CORE 2007/8

Fig 6: Broad household structure of social renters in Cambridge sub-region

Source: CORE 2007/8

There were 2,974 lets recorded in the Cambridge sub-region in 2007/08. In the sub-region as a whole, around 39% of these lets were to single people. 41% of lets were to households including children. Childless couples made up 14% of new lets.

There are some differences at district level – Cambridge City had a comparatively high percentage of lets to single people (52%) and a smaller number of lets to couples and families (35%) than elsewhere in the sub-region. There were far fewer single people and couples (36%) housed in East Cambridgeshire than elsewhere. South Cambridgeshire housed the largest percentage of couples (24%) in the sub-region and the smallest percentage of lone parents (15%).

Some “other” households include children. These have been split out from “other” households containing all adults. Some of these are possibly step-families or three-generation households. It is difficult to unpick this precisely because only relationships to the household reference person are shown and it only shows if other people in the house are

“partner”, “child” or “other” (which could include “partner’s child”, “parent”, “sibling” as well as “unrelated”).

When this is compared with the overall population (see chapter 10 and 29) there is a far higher percentage of single people and lone parents in social rented housing than there are in the population as a whole. For example in Cambridge City population estimates for 2006 calculated 8% of all households were lone parents. 20% of those housed in social rented housing in 2008 were lone parents. There are proportionately fewer couples in the population with and without children than were housed.

Fig 7: Age by district

Source: CORE 2007/8

St Edmundsbury has the youngest age profile of social rented tenants – almost a half are aged under 31. In the rest of the sub-region around 40% of lets were to people in this age group. Cambridge City had the second youngest age profile with 44% of lets to people are 31 or under.

South Cambridgeshire has an older profile than the other districts – 26% of lets were to people over 60. Fenland also had a higher proportion of lets to older people than elsewhere in the sub-region (15%). Only 6% of lets in the City and East Cambridgeshire were to people aged 60 or over.

This table records the economic status of the household reference person. Around 40% of households housed had a least one person in full or part time work. Over half of all families had at least one person working and most were employed full time. Couples were also more likely to being working than other types of household.

Just over a quarter of household heads were “not seeking work”. 57% of lone parents were in this category.

11% of people were retired and 11% were unable to work due to ill-health or disability. A quarter of couple households included at least one retired person.

Some 34% of recorded households had previously been housed in the social rented sector, and this was the most common form of previous tenure for all household types. 43% of lets to families were due to movement within the social sector. Single people were less likely to be moving within the social sector than other household types – 28% of single households had previously been in social rented housing.

23% of households had previously been living in market housing as either owner occupiers, private renters or in tied accommodation. Most of these were renting privately. 19% of all lets were to people who had been renting privately. After social renting, this was the most common previous tenure for couples and families.

For single people, the most common form of previous tenure after social rent was living with family members or friends (26%). This was also a common form of previous tenure for lone parents (24%). 22% of all households had previously living with family or friends. Almost 11% of households had been living in temporary accommodation. Most of these were households that included children, although there were also a few single person households in this situation.

Source: CORE 2007/8

Overcrowding was the most common known reason for need to move (17% of all households). This was particularly a problem for households with children. A third of families and 23% of lone parents left their previous accommodation because it was overcrowded.

The most common reason for couples leaving their previous address was because ill health or disability making the property unsuitable. Around a third of couples without children were over 60, and this group had the largest proportion of lettings to older people.

Single people were more likely to cite “moving to independent accommodation” as the main reason for leaving their previous home (24%). This was also an important reason for lone parents in need of re-housing. 32% of single person households and 59% of lone parents were aged under 31, so this higher percentage of people moving to independent accommodation is likely to be due to people leaving home for the first time. 10% of households experienced relationship breakdowns (including domestic violence), and 8% were asked to leave by family or friends.

Single people and lone parents were more likely to have left their previous home because of problems with neighbours (including racial harassment) than other types of households. Single people and couples were more likely than other groups to have left their previous home because of poor condition. Families and lone parents were the groups most likely to have been evicted/ had their homes repossessed, or to have left because of affordability issues.

Household income of social renters

At least 35% of all lettings were to households whose source of income was all from benefits or a state pension. Just over a quarter of households (at least) received no benefits. At least 12% of households had a weekly income partly from benefits and partly from other sources. 27% of household withheld data on income.

Table 14: Source of household income by district

	Cambridge	E Cambs	Fenland	Hunts	S Cambs	Forest Heath	St Edmundsbury	Sub-Region

Fig 8: Average annual household income by household structure and district

Source: CORE 2007/8

At least 47% of households were in receipt of some benefits as part of their household income and around 27% of households received no benefits at all.

Single person households have the lowest income, ranging between £7,248 per year in Fenland to £10,123 in South Cambridgeshire with an average of £8,273 for the sub-region as a whole. Lone parents have a slightly higher income (the sub-regional average is £9,767) despite them being slightly less likely to be in full or part time employment than single person households (34% of singles are working, compared to 29% of lone parents across the sub-region).

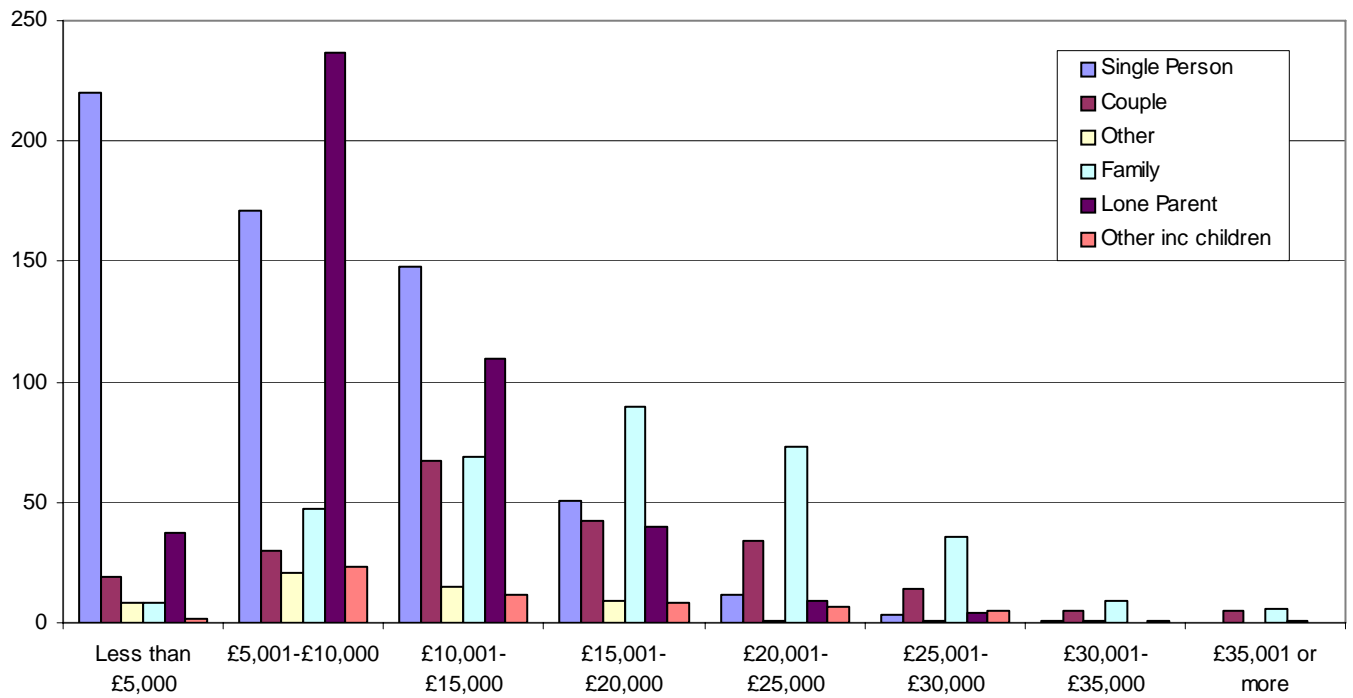

Families have the highest incomes in most of the districts ranging from £15,094 in Fenland to £19,830 in South Cambridgeshire. "Other households with children" have the highest incomes in Fenland (and the highest average income in the sub-region as a whole). Childless couples in Cambridge City have a higher average household income (£16,387) than families (£15,328) in the City.

Single people and lone parents were more likely to be in the lower income bands (below £15,000). These were the groups with the lowest proportions of working households. Those that were in work only had a single income. Families were more likely to have an income of £15,000 or above. Couples without children were generally worse off than families, but better off than single people and lone parents.

Around 10% of those housed had an income greater than £25,000. Most of these were families or couples. One of the main target groups for shared ownership products is existing social renters and nationally, most shared ownership purchasers have a household income of £25,000⁶, so this is potentially the market within the social rented target group.

CORE provides data on the reason why a property is vacant which can provide some insight as to why people leave. 17% of homes were new-build, i.e. had previously not been let. Forest Heath had the highest percentage of lets into new-build properties and Huntingdonshire had the lowest.

30% (899) of the properties let were vacant due to a move within the social rented sector. This is unsurprising given the data on “previous tenure” which showed about 34% of moves were within the sector. Transfers were the main reason for vacancies in larger properties. St Edmundsbury had the largest proportion of vacancies due to internal transfers (i.e. people moving to a different properties managed by the same RSL). South Cambridgeshire had the lowest proportion of transfers overall.

866 or 29% of properties were vacant due to people moving in to private sector or other accommodation. Some of this other accommodation may include temporary and may be therefore be a delayed transfer within social rented. Huntingdonshire had the highest percentage of cross tenure moves and Forest Heath had the lowest followed by Cambridge City.

15% of properties were vacant due to the death of the previous tenant. This is slightly higher at 18% in south Cambridgeshire, most probably due to the older profile of tenants.
