## 1. Introduction

This report provides a summary of key findings from the National Child Measurement Programme (NCMP) for pupils in Reception (aged 4 to 5 years) and Year 6 (aged 10 to 11 years) in Cambridgeshire and Peterborough in 2018/19, as well as the three combined years of 2016/17 – 2018/19.

The NCMP measures the height and weight of children to assess overweight and obesity levels in children within primary schools to support local public health initiatives and inform the local planning and delivery of services for children.<sup>1</sup> Children measured as part of the NCMP are grouped according to the below criteria:

NCMP Group	Definition
Underweight	Body Mass Index less than 2 <sup>nd</sup> centile of UK90 growth reference
Healthy weight	Body Mass Index between 2 <sup>nd</sup> and less than 85 <sup>th</sup> centile of UK90 growth reference
Overweight	Body Mass Index greater than or equal to 85 <sup>th</sup> centile but less than 95 <sup>th</sup> centile of the UK90 growth reference
Obese	Body Mass Index greater than or equal to 95 <sup>th</sup> centile of UK90 growth reference
Severe Obesity	Body Mass Index greater than or equal to 99.6 <sup>th</sup> centile of UK90 growth reference

Source: Public Health England NCMP Local Authority Profiles

NCMP data are provided to Public Health teams through a joint agreement between Public Health England and NHS Digital; this is the source of all tables and graphs presented within this report. This report primarily focuses on obesity and severe obesity, but data are available for other weight classifications if required.

Data relate only to maintained schools in Cambridgeshire and Peterborough, with independent and special schools (estimated to comprise approximately 7% of primary school-aged children nationally<sup>2</sup>) excluded. Data exclude pupils who are resident in Cambridgeshire or Peterborough but attend a school located within another geographical area and pupils that attend a school within Cambridgeshire or Peterborough but do not live within the area.

In section 3 of this report, comparison of Cambridgeshire, Cambridgeshire districts and Peterborough data is made to England to illustrate historic and current performance against the national average.<sup>3</sup> In section 4, NCMP data for Cambridgeshire and Peterborough are combined, as well as shown individually. Generally, Cambridgeshire data and Peterborough data are compared with the Cambridgeshire and Peterborough average and data for the districts in Cambridgeshire are compared with the Cambridgeshire average. Where Peterborough data are broken down within Peterborough, they are compared with the Peterborough average.

Data for the local comparisons within this report are aggregated (pooled) across NCMP years in order to increase the statistical validity of the findings and to smooth out annual fluctuations. However, small numbers recorded must be observed with caution.

<sup>3</sup> Data available from National Child Measurement Programme – England, 2018-19: Tables [online] Available from: <https://digital.nhs.uk/data-and-information/publications/statistical/national-child-measurement-programme/2018-19-school-year>

## 2. Executive Summary

- The 2018/19 rate of overweight (including obesity) pupils in Cambridgeshire is 17.7% for Reception pupils and 27.0% for Year 6 pupils. Cambridgeshire has had statistically significantly low percentages of overweight (including obesity) pupils of both Reception and Year 6 age in comparison to England for five consecutive years between 2014/15 and 2018/19.
- The 2018/19 rate of overweight (including obesity) pupils in Peterborough is 21.7% for Reception pupils and 36.9% for Year 6 pupils. Peterborough is statistically similar to England for Reception age pupils, and statistically significantly worse for Year 6 overweight (including obesity) prevalence. In 2017/18, Peterborough was statistically similar among Year 6 pupils for this indicator.
- Pooled data for the 3 years 2016/17 – 2018/19 show that Cambridgeshire has a statistically significantly high percentage of Reception Year pupils with a healthy weight compared to the Cambridgeshire and Peterborough average. However, the percentage of pupils within this age group in Fenland with a healthy weight is statistically significantly low compared to the Cambridgeshire and Peterborough average. For Year 6, Cambridgeshire has a statistically significantly high percentage of pupils with a healthy weight and statistically significantly low percentages of pupils with obesity or severe obesity in comparison to the Cambridgeshire and Peterborough average. Furthermore, Fenland has a statistically significantly low percentage of Year 6 pupils with a healthy weight and statistically significantly high percentages with obesity or severe obesity in comparison to Cambridgeshire and Peterborough.
- Pooled data for 2016/17 – 2018/19 show Peterborough to have a statistically significantly low percentage of Reception and Year 6 pupils with a healthy weight compared to the Cambridgeshire and Peterborough average. Both age groups also have statistically significantly high percentages of pupils with obesity (including severe). 1.6% of Reception Year pupils in Peterborough are underweight which is statistically significantly higher than the Cambridgeshire and Peterborough average.
- There is strong correlation across Cambridgeshire and Peterborough between relative deprivation and recorded prevalence of obesity and severe obesity. Obesity and severe obesity within both the Reception and Year 6 age groups are statistically significantly worse than the Cambridgeshire and Peterborough average in the most deprived quintile for the pooled period 2016/17 – 2018/19 and statistically significantly better than this average for pupils within the least deprived quintile. At electoral ward level across Cambridgeshire and Peterborough, correlation between deprivation and obesity prevalence is stronger in the Year 6 cohort than in pupils of Reception age.
- There are observed inequalities in NCMP overweight/obese/severely obese prevalence between ethnicities across Cambridgeshire and Peterborough, with statistically significantly poor indicator values in comparison to the Cambridgeshire and Peterborough average observed among groups including 'Black-African', 'Black – Caribbean', 'Bangladeshi', 'Pakistani' and 'White and Black African' ethnic groups.
- Cambridgeshire NCMP participation rates in 2018/19 are higher than in 2017/18 for Reception pupils and Year 6 pupils. However, Cambridgeshire participation rates remain lower than the national rates.

- Peterborough participation rates in 2018/19 are lower than in 2017/18 for both Reception and Year 6 age groups. Peterborough participation rates are also lower than the national rate for both age groups.

### 3. Comparison of NCMP performance in Cambridgeshire and Peterborough with performance in England

In this section, NCMP data for Cambridgeshire and Peterborough and constituent areas are compared with the national dataset for England as a whole<sup>4</sup>.

#### Participation

**Table 1: National Childhood Measurement Programme Participation Rates 2018/19, Cambridgeshire, Peterborough, & England**

Area	Number of children measured		Participation rate (%)	
	Reception	Year 6	Reception	Year 6
Cambridgeshire	6,637	6,364	94.1	91.5
Peterborough	2,797	2,776	90.7	91.6
England	597,812	600,449	95.3	94.5

Based on the Local authority area that submitted (Table 2 in national dataset).

Source: National Child Measurement Programme, NHS Digital

Participation in the NCMP programme is lower than the national rate in Peterborough and Cambridgeshire for both Reception and Year 6 pupils.

Cambridgeshire participation rates in 2018/19 are higher than in 2017/18 for both Reception and Year 6 age groups (2017/18 participation rates were 93.5% for Reception pupils and 90.4% for Year 6 pupils, data not shown).

2018/19 participation rates for Cambridgeshire are 1.2 percentage points below the national rate for Reception pupils and 3.0 percentage points below the national rate for Year 6 pupils.

Peterborough participation rates in 2018/19 are lower than in 2017/18 for both Reception and Year 6 age groups (2017/18 participation rates were 96.1% for Reception pupils and 94.7% for Year 6 pupils, data not shown).

2018/19 participation rates for Peterborough are 4.6% and 2.9% points below the national rate for Reception and year 6 pupils respectively.

Local analysis of non-measurement indicates the primary reasons as 'parent opt-out', 'no longer at school' and 'absent'. The proportion of non-measurement appears to be fairly consistent across the five Cambridgeshire districts.

<sup>4</sup> Data available from National Child Measurement Programme – England, 2018-19: Tables [online] Available from: <https://digital.nhs.uk/data-and-information/publications/statistical/national-child-measurement-programme/2018-19-school-year>

## Recorded prevalence – Overweight

**Table 2: National Child Measurement Programme Results, Reception Year Overweight (including Obesity) Recorded Prevalence Trend, 2014/15 – 2018/19, Cambridgeshire Districts, Cambridgeshire, Peterborough and England**

Area	2014/15	2015/16	2016/17	2017/18	2018/19
Cambridge	17.3%	16.4%	16.9%	15.4%	14.6%
East Cambridgeshire	19.5%	19.7%	16.9%	16.0%	15.2%
Fenland	22.4%	21.4%	20.2%	19.9%	23.3%
Huntingdonshire	20.0%	19.0%	19.7%	17.6%	19.4%
South Cambridgeshire	18.8%	17.3%	18.2%	18.0%	15.7%
Cambridgeshire	19.6%	18.7%	18.5%	17.5%	17.7%
Peterborough	21.3%	22.8%	23.2%	20.9%	21.7%
England	21.9%	22.1%	22.6%	22.4%	22.6%

Local authority areas are assigned based on the postcode of the child (Table 3B in national dataset).

Key
Statistically significantly better than England
Statistically similar to England
Statistically significantly worse than England

In comparison to England, Cambridge, South Cambridgeshire and Cambridgeshire have had statistically significantly low percentages of Reception age overweight (including obesity) for each of the five years 2014/15 – 2018/19. East Cambridgeshire has also been statistically significantly low since 2015/16.

Fenland has changed from statistically similar Reception Year Overweight (including Obesity) in 2017/18 to statistically significantly lower in 2018/19.

Peterborough had a statistically similar percentage to England since 2014/15.

**Table 3: National Child Measurement Programme Results, Year 6 Overweight (including Obesity) Recorded Prevalence Trend, 2014/15-2018/19, Cambridgeshire Districts, Cambridgeshire, Peterborough and England**

Area	2014/15	2015/16	2016/17	2017/18	2018/19
Cambridge	25.4%	23.2%	28.7%	27.7%	25.9%
East Cambridgeshire	27.2%	29.2%	23.7%	27.3%	26.7%
Fenland	32.6%	33.9%	34.5%	35.0%	34.7%
Huntingdonshire	27.5%	30.0%	28.2%	29.9%	27.5%
South Cambridgeshire	24.5%	25.1%	22.5%	23.9%	22.9%
Cambridgeshire	27.2%	28.2%	27.1%	28.4%	27.0%
Peterborough	32.2%	34.2%	36.8%	32.8%	36.9%
England	33.2%	34.2%	34.2%	34.3%	34.3%

Local authority areas are assigned based on the postcode of the child (Table 3B in national dataset).

Source: National Child Measurement Programme, NHS Digital

Key
Statistically significantly better than England
Statistically similar to England
Statistically significantly worse than England

In comparison to England, Cambridgeshire has had a statistically significantly low percentage of Year 6 pupils overweight (including obese) for the five consecutive years 2014/15-2018/19, with statistically significantly low percentages also observed in all Cambridgeshire districts other than Fenland, which has been statistically similar to England for the five year period shown.

Peterborough has changed from statistically significantly similar to England in 2017/18 to statistically significantly worse in 2018/19.

**Recorded prevalence - Obesity**

**Table 4: National Child Measurement Programme Results, Reception Year Obesity Recorded Prevalence Trend, 2014/15-2018/19, Cambridgeshire Districts, Cambridgeshire, Peterborough & England**

Area	2014/15	2015/16	2016/17	2017/18	2018/19
Cambridge	6.1%	6.0%	6.3%	6.6%	5.2%

Key
Statistically significantly better than England
Statistically similar to England
Statistically significantly worse than England

Obesity prevalence in Reception pupils has been statistically significantly lower in Cambridgeshire when compared to England from 2014/15 – 2018/19. It has also been consistently statistically significantly lower than England within many Cambridgeshire districts. In 2018/19 all of the Cambridgeshire districts are statistically significantly lower than England for this indicator except Fenland, which is statistically similar.

Prevalence of obesity in Reception age pupils in Peterborough continues to be statistically similar to England since 2014/15.

**Table 5: National Child Measurement Programme Results, Year 6 Obesity Recorded Prevalence Trend, 2014/15-2018/19 Cambridgeshire Districts, Cambridgeshire, Peterborough & England**

Area	2014/15	2015/16	2016/17	2017/18	2018/19
Cambridge	14.6%	11.3%	15.7%	15.4%	13.3%
East Cambridgeshire	14.4%	15.3%	11.3%	14.6%	15.0%

Statistically similar to England
Statistically significantly worse than England

Cambridgeshire, and all its districts except Fenland, have had statistically significantly low Year 6 obesity prevalence in comparison to England since 2014/15. Fenland has been statistically similar to the England rate since 2014/15.

Peterborough has changed from statistically similar in 2017/18 to statistically significantly worse than England in 2018/19. Prevalence has increased by 2.0 percentage points during this time (from 20.7% to 22.7%).

## 4. Local National Child Measurement Programme Analysis, 2016/17 - 2018/19

In this section NCMP data for Cambridgeshire and Peterborough are combined, as well as shown individually. Generally, Cambridgeshire data and Peterborough data are compared with the Cambridgeshire and Peterborough average and data for the districts in Cambridgeshire are compared with the Cambridgeshire average. Where Peterborough data are broken down within Peterborough they are compared with the Peterborough average.

Data are aggregated (pooled) across NCMP years in order to increase the statistical validity of the findings and to smooth out annual fluctuations.

Key
Statistically significantly better than Cambridgeshire/Cambridgeshire & Peterborough average
Statistically similar to Cambridgeshire/Cambridgeshire & Peterborough average
Statistically significantly worse than Cambridgeshire/Cambridgeshire & Peterborough average

80.0% of Reception-age pupils in Cambridgeshire and Peterborough have a healthy weight for the 2016/17 – 2018/19 three-year pooled period. Cambridgeshire has a statistically significant high percentage of healthy weight and statistically significantly low percentage of obese pupils compared to Cambridgeshire and Peterborough average.

Fenland has a statistically significant low percentage of healthy weight pupils and statistically significantly high percentage of obese pupils compared to Cambridgeshire.

Cambridge has a statistically significantly high percentage of healthy weight pupils and statistically significantly low percentage of overweight pupils compared to Cambridgeshire.

Peterborough has a statistically significantly high percentage of underweight pupils, overweight and obese/severely obese pupils in comparison to the Cambridgeshire and Peterborough average. Peterborough also has a statistically significant low percentage of pupils with healthy weight compared to the Cambridgeshire and Peterborough average.

**Table 7: National Child Measurement Programme Results, Year 6, 2016/17 – 2018/19 Pooled, Cambridgeshire Districts, Cambridgeshire, Peterborough, and Cambridgeshire and Peterborough combined**

Source: National Child Measurement Programme, NHS Digital

Key
Statistically significantly better than Cambridgeshire/Cambridgeshire & Peterborough average
Statistically similar to Cambridgeshire/Cambridgeshire & Peterborough average
Statistically significantly worse than Cambridgeshire/Cambridgeshire & Peterborough average

Cambridgeshire and Peterborough follow nationally observed trends in that fewer pupils in Year 6 have a healthy weight compared to Reception year and conversely, percentages of pupils who are overweight or obese are higher within the Year 6 age group.

In South Cambridgeshire, the percentage of pupils with a healthy weight is statistically significantly higher than the Cambridgeshire average and the percentage of obese and severely obese pupils are statistically significantly lower than the Cambridgeshire average.

In Fenland, the percentage of pupils with a healthy weight is statistically significant low compared to the Cambridgeshire average and percentages of pupils obese and severely obese are statistically significantly high.

Cambridgeshire has a statistically significantly higher percentage of pupils with a healthy weight and statistically significantly lower percentages of pupils with obesity/severe obesity than the Cambridgeshire and Peterborough average, whereas Peterborough has statistically significantly worse percentages than the Cambridgeshire and Peterborough combined average for these three indicators.

## 4.2 Analysis by Sex

Key	
Statistically significantly better than Cambridgeshire/Cambridgeshire & Peterborough average	
Statistically similar to Cambridgeshire/Cambridgeshire & Peterborough average	
Statistically significantly worse than Cambridgeshire/Cambridgeshire & Peterborough average	

In comparison to Cambridgeshire, South Cambridgeshire has a statistically significantly low percentages of obesity for both females and males in Year 6. Fenland has statistically significantly higher percentages of obesity for both females and males in Year 6 and a statistically significantly higher percentage of obesity in females in Reception.

Peterborough has statistically significantly higher percentages than the combined Cambridgeshire and Peterborough average for obesity in Reception and Year 6 females and males. In contrast, Cambridgeshire has statistically significantly lower percentages.

**Table 9: National Child Measurement Programme Results by Sex, Reception & Year 6 Age Severe Obesity Recorded Prevalence, 2016/17 - 2018/19 Pooled, Cambridgeshire Districts, Cambridgeshire, Peterborough, and Peterborough & Cambridgeshire**

Key
Statistically significantly better than Cambridgeshire & Peterborough average
Statistically similar to Cambridgeshire & Peterborough average
Statistically significantly worse than Cambridgeshire & Peterborough average

In comparison to the Cambridgeshire and Peterborough average, the percentage of obese pupils in Reception is statistically significantly low for 'Asian: Indian' pupils. 'Mixed: White and Asian' has statistically significantly lower percentages of obese pupils in both Reception and Year 6. The percentages of 'White: British' pupils who are obese and severely obese are statistically significantly lower for Year 6.

'Black: African' pupils has statistically significantly higher percentages of obesity/severe obesity in both Reception and Year 6 than the Cambridgeshire and Peterborough average.

The percentages of Reception pupils who are severely obese are also statistically significantly higher among 'Black: Any other Black background', 'Asian: Pakistani' and 'Mixed: White and Black background' compared to the Cambridgeshire and Peterborough average.

The percentages are statistically significantly high for obesity/severe obesity in Year 6 pupils among several minority ethnicities compared to the Cambridgeshire and Peterborough average.

Key
Statistically significantly better than Cambridgeshire average
Statistically similar to Cambridgeshire average
Statistically significantly worse than Cambridgeshire average

In Cambridgeshire, the percentage of obese Reception year pupils of 'Mixed: White and Asian' and 'Asian: Indian' ethnicities are statistically significantly low. 'White: Irish', 'Black: African' and 'Asian: Bangladeshi' ethnicities have statistically significantly high obesity prevalence in Reception pupils, compared to the Cambridgeshire average.

Among 'Black: African', 'Black: Any other Black background' and 'Mixed: White and Black African' ethnicities severe obesity prevalence is also statistically significantly high for Reception pupils compared to the Cambridgeshire average.

'Black: African' and 'Asian: Any other Asian background' and 'Mixed: White and Black Caribbean' ethnic groups have statistically significantly higher prevalence of both obesity and severe obesity in year 6 pupils than the Cambridgeshire average.

Key
Statistically significantly better than Cambridgeshire & Peterborough average
Statistically similar to Cambridgeshire & Peterborough average
Statistically significantly worse than Cambridgeshire & Peterborough average

The table above shows prevalence of obesity and severe obesity for both Reception and Year 6 pupils in Cambridgeshire and Peterborough. There is a clear correlation between relative deprivation and the prevalence of obesity and severe obesity.

The most deprived quintile has a statistically significantly high prevalence for all four of indicators shown in comparison to the Cambridgeshire and Peterborough average, whereas prevalence is statistically significantly low in the least deprived quintile for all indicators.

<sup>5</sup> Quintile – the population is divided into five equal groups according to level of deprivation. Quintile 1 is most deprived, quintile 5 is least deprived. Deprivation is assessed using the Indices of Multiple Deprivation (IMD 2019).

Key
Statistically significantly better than Peterborough average
Statistically similar to Peterborough average
Statistically significantly worse than Peterborough average

The percentages of obese and severely obese Year 6 pupils is statistically significantly high in the most deprived quintile. It is statistically significantly low compared to the Peterborough average in the two least deprived quintiles.

<sup>6</sup> As above

<sup>7</sup> Quintile – the population is divided into five equal groups according to level of deprivation. Quintile 1 is most deprived, quintile 5 is least deprived. Deprivation is assessed using the Indices of Multiple Deprivation (IMD 2019).

## 4.5 Electoral Ward Analysis

Key
Statistically significantly better than Cambridgeshire/Cambridgeshire & Peterborough average
Statistically similar to Cambridgeshire/Cambridgeshire & Peterborough average
Statistically significantly worse than Cambridgeshire/Cambridgeshire & Peterborough average

The table above displays electoral wards in Cambridgeshire and Peterborough with at least one statistically significant value for obesity/severe obesity in either Reception or Year 6 pupils in comparison to the Cambridgeshire and Peterborough average for the pooled period 2016/17 – 2018/19. Rows are displayed alphabetically by area and then electoral ward.

Electoral wards with statistically significantly high prevalence of obesity/severe obesity tend to be in Peterborough and Fenland, whereas electoral wards with statistically significantly low prevalence are mainly in South Cambridgeshire, East Cambridgeshire, Huntingdonshire and Cambridge.

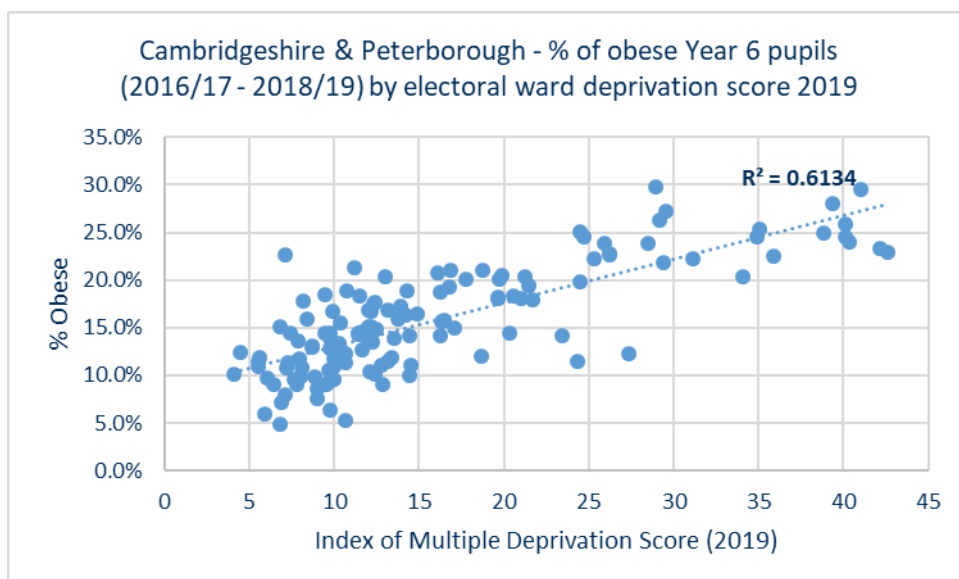

### Figures 1 & 2: National Child Measurement Programme Results, Obesity Prevalence & Electoral Ward Deprivation Correlation, 2016/17 - 2018/19 Pooled, Cambridgeshire & Peterborough

The two figures below plot the recorded prevalence of obesity in Reception and Year 6 against the Index of Multiple Deprivation 2019 (IMD 2019) score for the ward representing the home residence of pupils participating in the NCMP. Greater levels of correlation between these two variables is observed in Year 6 pupils ( $R^2 = 0.6$ ) in comparison to pupils in Reception ( $R^2 = 0.2$ )<sup>8</sup>, indicating that for Year 6 pupils obesity is more strongly associated with levels of relative deprivation.

Source: National Child Measurement Programme, NHS Digital (2016/17 - 2018/19), Information Centre and Index of Multiple Deprivation 2019, Communities and Local Government

<sup>8</sup>  $R^2$  is a statistical measure of how close the data are to the fitted regression line

#### 4.6 ONS Area Classification Analysis

The cleaned NCMP dataset from NHS Digital includes ONS Area Classifications (OAC). OAC is a system of population stratification that categorises local areas based on a range of socio-demographic characteristics including deprivation, ethnicity and urban/rural environment. Categories are named in a way that describes the type of population predominant in the assigned areas. ‘Supergroups’ are comprised of two or more ONS groups that the ONS consider to have appropriately similar characteristics to be able to be amalgamated in to a single classification group.

Key
Statistically significantly better than Cambridgeshire & Peterborough average
Statistically similar to Cambridgeshire & Peterborough average
Statistically significantly worse than Cambridgeshire & Peterborough average

Percentages of obesity and severe obesity are statistically significantly lower than the Cambridgeshire and Peterborough average within the ‘Countryside’ Reception and Year 6 pupils, and ‘Urban Fringe’ Year 6 pupils. The ‘Professional city life’ Supergroup has statistically significantly low percentages for severe obesity in Reception pupils and obesity in Year 6 pupils.

Reception age and Year 6 percentages of obesity and severe obesity are statistically significantly higher than average within the ‘Disadvantaged urban communities’ and ‘Multicultural city life’ Supergroups. ‘Miscellaneous built up areas’ also has a prevalence of obesity and severe obesity that is statistically significantly higher than the Cambridgeshire and Peterborough average for Year 6 pupils.

Key
Statistically significantly better than Cambridgeshire average
Statistically similar to Cambridgeshire average
Statistically significantly worse than Cambridgeshire average

Within Cambridgeshire, the percentages of obesity in Reception and Year 6 pupils is statistically significantly low in the ‘Professional City Life’ and ‘Urban Fringe’ Supergroups. The percentages of obese/severely obese Reception and Year 6 pupils are statistically significantly high for the ‘Disadvantaged urban communities’ Supergroup. The percentage of obese/severely obese Year 6 pupils is also statistically significantly high for ‘Miscellaneous Built-Up Areas’. Severe obesity is statistically significantly low among the ‘Urban fringe’ Year 6 pupils.

Key
Statistically significantly better than Cambridgeshire average
Statistically similar to Cambridgeshire average
Statistically significantly worse than Cambridgeshire average

The 'Blue collar urban families' and 'Small town communities' ONS groups have levels of obesity/severe obesity for Reception age pupils that are statistically significantly high.

'Mature urban households' have statistically significantly high levels of obesity for Year 6 pupils.

Six ONS groups have levels of obesity for Year 6 pupils that are statistically significantly low compared to Cambridgeshire.

Key
Statistically significantly better than Peterborough average
Statistically similar to Peterborough average
Statistically significantly worse than Peterborough average

ONS groupings for Peterborough are generally statistically similar to the area average, in part due to relatively low numbers. Statistically significantly low percentages are observed within the 'Urban commuter', and 'Well off mature households' ONS groups. Statistically significantly high percentages are observed in 'Blue Collar Urban Families', 'Mature Urban households', 'Multicultural Suburbia' and 'Multicultural Urban' ONS groups. All of the observations are for Year 6 pupils. Prevalence of obesity in Reception pupils is statistically significantly high within the 'Multicultural Urban' ONS group.

#### 4.7 Population & Clinical Obesity Definitions Analysis

NHS Digital also provides data using clinical obesity thresholds, as well as the usual population definition for obesity. For population monitoring, obesity is defined as having a Body Mass Index (BMI) greater than or equal to the 95<sup>th</sup> centile, whereas in the clinical setting, obesity is defined as a BMI greater than or equal to the 98<sup>th</sup> centile. Due to this higher threshold for inclusion, percentages of observed obese pupils are smaller when using the clinical obesity threshold than the population monitoring threshold as noted within the three tables below.

**Table 23: Recorded Prevalence of Obesity - Population & Clinical Definitions, Cambridgeshire & Peterborough, 2016/17 - 2018/19 Pooled**

Sex	Cambridgeshire and Peterborough															
	Population cut offs								Clinical cut offs

Key
Statistically significantly better than Cambridgeshire & Peterborough average
Statistically similar to Cambridgeshire & Peterborough average
Statistically significantly worse than Cambridgeshire & Peterborough average

Data using both the population cut offs and clinical cut offs show statistically significantly high percentages of obesity and severe obesity for Year 6 male pupils compared to the Cambridgeshire and Peterborough average and, conversely, statistically significantly low percentages for females. All other values are statistically similar to the Cambridgeshire and Peterborough average.

**4.8 Small Area Analysis – NCMP Obesity and Overweight Prevalence, Cambridgeshire and Peterborough Lower Super Output Areas, 2016/17 – 2018/19.**

LSOA level data maps help the visualisation of recorded obesity prevalence across the Cambridgeshire and Peterborough area. However, it is important that these maps of small geography data are used with caution as such small numbers are subject to a higher degree of natural variation, and as such this may cause issues of validity.
